

VZ58 US made compliance parts

Pistol grip

Pistol grip cast from hard Poly Urethane. The original composite grip was used as a pattern. These are hand made and are not injection molded like an AK grip. Each one is unique and they are strong and solid. They have been grit blasted and coated with Satin Deft Clear Wood Finish can be used as is or sanded and/or painted as desired. We could have purchased a new single stack receiver for less than we have invested in this process. We own only one mold and our production rate is only one part per day. E-mail us for availability before ordering. The mold was a big investment and its life expectancy is unknown. Once mold wears out or breaks a business decision will be made weather to buy another mold or discontinue this product. Price is \$30 each or two for \$55.

The photos below attempt to capture the minor cosmetic anomalies present on most parts.
